How to Upload Mods

There is a difference between

Mods and Mod Packs.

Example == Darkness Falls is a
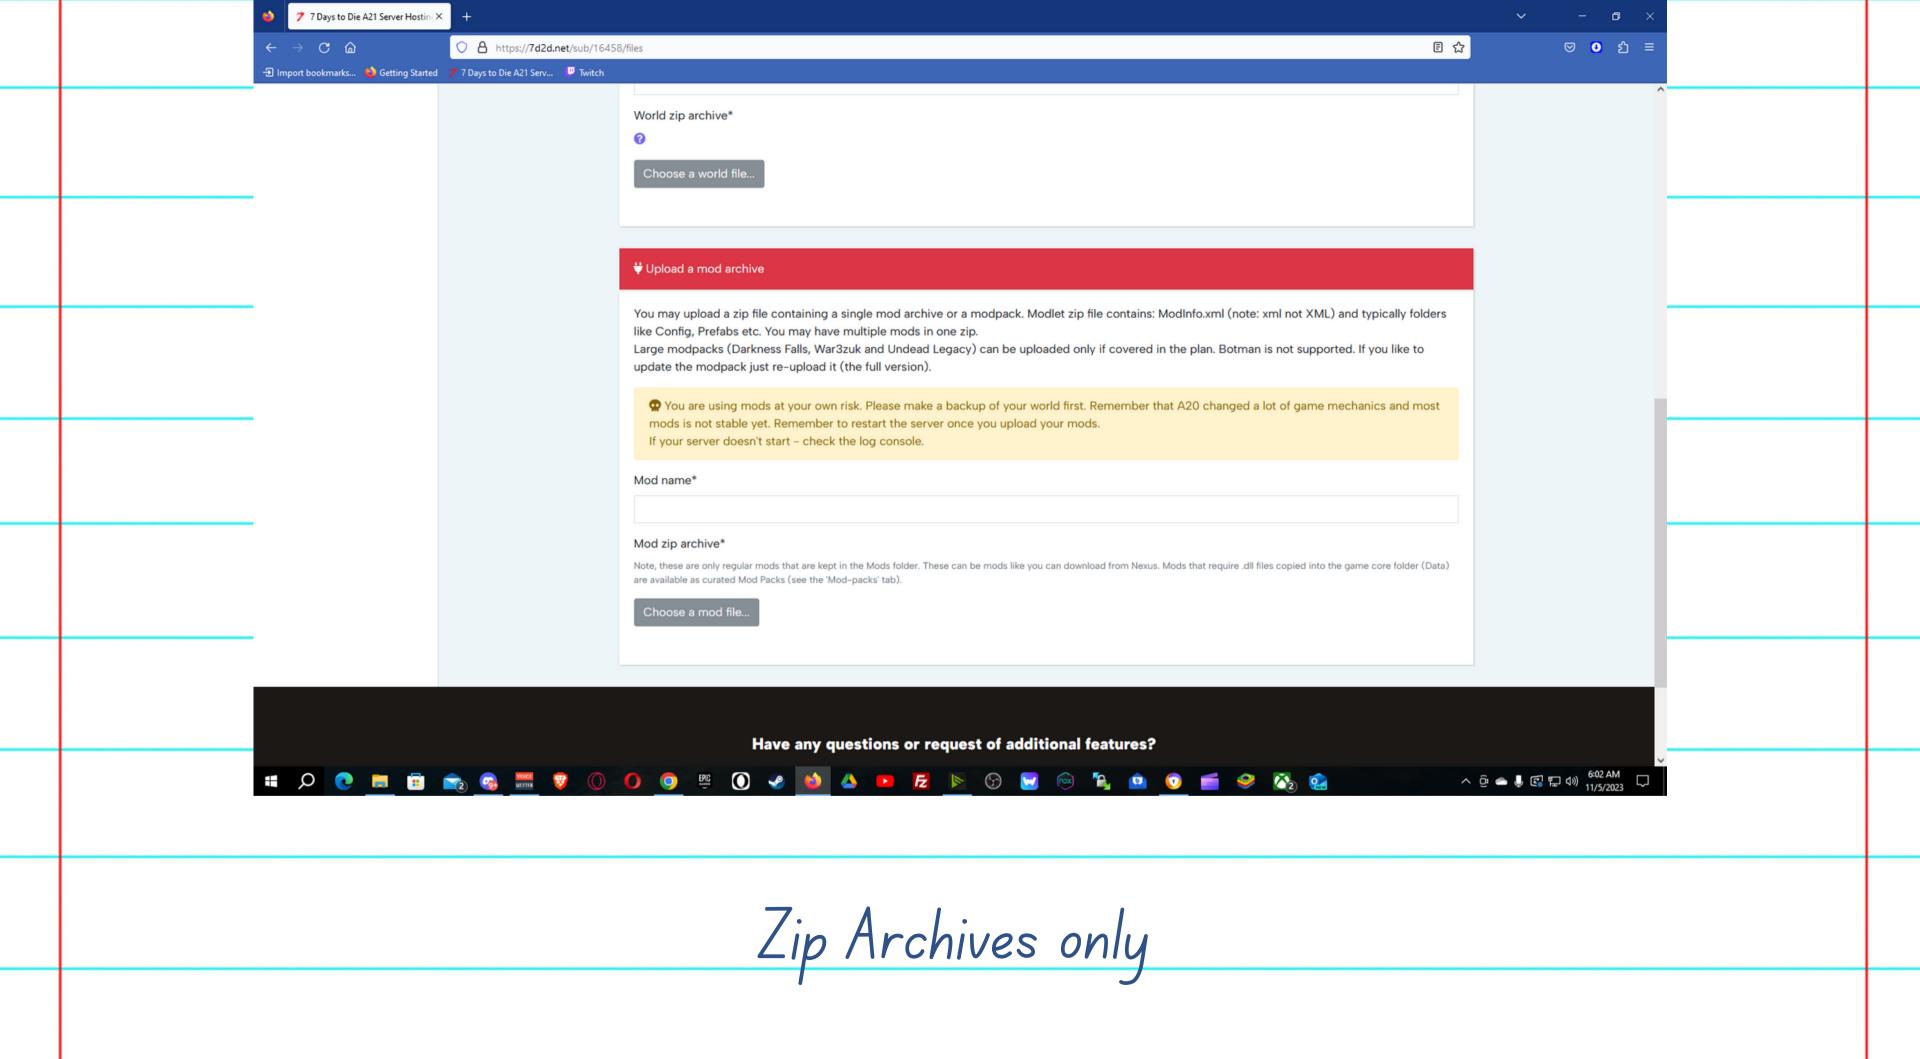

Mod Pack.

Each Archive must have a MODINFO.XML File
If not our system will reject it.

If you have a L or XL server you can use FTP
to access your server and upload UNZIPPED
files.

If you have trouble Reach out to us on Discord

World zip archive*

❓

[Choose a world file...]

☠ **Upload a mod archive**

You may upload a zip file containing a single mod archive or a modpack. Modlet zip file contains: ModInfo.xml (note: xml not XML) and typically folders like Config, Prefabs etc. You may have multiple mods in one zip.
Large modpacks (Darkness Falls, War3zuk and Undead Legacy) can be uploaded only if covered in the plan. Botman is not supported. If you like to update the modpack just re-upload it (the full version).

> ☠ You are using mods at your own risk. Please make a backup of your world first. Remember that A20 changed a lot of game mechanics and most mods is not stable yet. Remember to restart the server once you upload your mods.
> If your server doesn't start – check the log console.

Mod name*

Mod zip archive*

Note, these are only regular mods that are kept in the Mods folder. These can be mods like you can download from Nexus. Mods that require .dll files copied into the game core folder (Data) are available as curated Mod Packs (see the 'Mod-packs' tab).
